Republic of the Philippines **DEPARTMENT OF SCIENCE AND TECHNOLOGY Philippine Atmospheric, Geophysical and Astronomical Services Administration (PAGASA)** Weather Division

TROPICAL CYCLONE BULLETIN NR. 33F

Super Typhoon GORING (SAOLA) Issued at 11:00 PM, 30 August 2023

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall

Forecast accumulated rainfall from tonight to tomorrow evening

• 50-100 mm: Ilocos Norte, Ilocos Sur, Abra, and the western portions of Pangasinan and Apayao

Forecast rainfall are generally higher in elevated or mountainous areas. Under these conditions, flooding and raininduced landslides are expected especially in areas that are highly or very highly susceptible to these hazards as identified in hazard maps and in localities that experienced considerable amounts of rainfall for the past several days.

The **enhanced Southwest Monsoon** will also bring occasional or monsoon rains over the western portions of Luzon in the next three days. For more information, refer to **Weather Advisory #13 for Southwest Monsoon** issued at 11:00 PM today.

Severe Winds

The enhanced Southwest Monsoon will continue to bring **gusty conditions** over the following areas not under any Wind Signal, especially in coastal and upland/mountainous areas exposed to winds:

- Today until Friday: Ilocos Region, Cordillera Administrative Region, Zambales, Bataan, Aurora, Bulacan, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, Western Visayas, and the northern portion of Eastern Visayas.
- Saturday: Zambales, Bataan, Bulacan, Aurora, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, Western Visayas, and the northern portion of Eastern Visayas.

HAZARDS AFFECTING COASTAL WATERS

A **Gale Warning is in effect** for most seaboards of Luzon and Visayas, and the eastern seaboard of Mindanao. Disruption in civilian maritime activities is expected over these areas (e.g., suspension of sea travel) due to hazardous sea condition. For more information, refer to **Gale Warning #15** issued at 5:00 PM today.

TRACK AND INTENSITY OUTLOOK

- Outside the PAR, GORING is forecast to follow a mainly west northwestward path across the waters off Guangdong, China, then turn generally west southwestward or southwestward for the remainder of the forecast period. On the track forecast, this tropical cyclone will be closest to land (i.e., near Hong Kong or Pearl River Delta) by Saturday morning, with a landfall scenario not ruled out due to the proximity of the track forecast to land and the associated uncertainty at this period of the forecast.
- GORING will begin to gradually weaken tomorrow evening as it begins to move over the waters off Guangdong China. Increasingly unfavorable conditions (e.g., cooler waters, entrainment of dry air from mainland China, interaction with land due to its proximity to it) will sustain the weakening trend. GORING is forecast to be downgraded to a severe tropical storm on Saturday and into a tropical storm on Sunday.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.

Unless re-entry occurs, **this is the final tropical cyclone bulletin.** Succeeding updates will be incorporated in the 24-Hour Public Weather Forecasts issued daily at 4:00 AM and 4:00 PM.
